is an element of an algebraic number field. Algebraic number theory studies the arithmetic of algebraic number fields " the ring of integers in the number field, the ideals and units in the ring of integers, the extent to which unique factorization holds, and so on. number theory introduces students not only to new algebraic notions but also to related concepts: groups, rings, fields, ideals, quotient rings and quotient fields, homomorphisms and isomorphisms, modules, and vector spaces. Author Pierre Samuel notes that students benefit from their studies of algebraic number theory by encountering many concepts fundamental to other branches of mathematics " algebraic geometry, in particular.
